business/computers
navigate the world of technology

Students in the business and computer technology programs were driven by their desire to learn and navigate the world of technology. With this motivation, they were guaranteed to succeed in their coursework and gain valuable knowledge required in society. Everything from common financial situations to networking was discussed in the courses, and pupils never faltered when it came to difficult programming. Macroeconomics, Computer Applications, and Computer Concepts were a few of the classes offered that had the potential to teach students about the phenomena of output, unemployment, and inflation.

Hardware, software, and the benefits of networking were covered within the programs, and by the end of the classes, students could identify different types of computers and their specific functions. Students obtained knowledge necessary for forming positive bonds with future coworkers in their chosen field, and the many ladies and gentlemen graduated with the confidence needed to serve those in their community.
